 TITLE : Production of Woodfibre Tiles in Poland in  
 1958/59  
 ORIG. PUB. : Przegl. nawiern., 1959, 15, No 4, 111-114  
 ABSTRACT : The total output of tiles in 1958 comprized  
 64.5 thousand tons or 17.3 million m<sup>2</sup> (Poland  
 occupies the 6<sup>th</sup> place in Europe after Sweden  
 Finland, West Germany, Norway and France, ex-  
 cluding USSR). Hard and porous tiles are being  
 manufactured. The manufacture of tiles having  
 hard surface is acheaved by treating finished  
 tiles with oil followed by thermal hardening.  
 The same approach is being followed in the  
 manufacture of perforated accustical tiles.

Title : The Treatment of Schizophrenia with Reserpine

Orig Pub : Neurol., neurochirurg. i psychiatr. polska, 1957, 7, No 5,  
701-705

Abstract : In the treatment of 34 schizophrenic patients with high doses (5-15 ng daily) of reserpine for 68 days, remissions occurred in 7 and improvement in 16 patients. One patient died during treatment, from perforation of the duodenal ulcer. Bradycardia developed in 80 percent of patients, symptoms of Parkinsonism almost in all. The authors connect the improvement of the psychic condition with the appearance of this symptom.

AUTHOR: Perzyna, Piotr (Warsaw); Wierzbicki, Tomasz (Warsaw)

TITLE: Temperature dependent and strain rate sensitive plastic materials

SOURCE: Archiwum mechaniki stosowanej, v. 16, no. 1, 1964, 135-143

TOPIC TAGS: dynamic metal property, strain rate effect, dynamic stress, dynamic strain, temperature stress relation

ABSTRACT: A critical review of previous works concerning the effects of simultaneous action of both strain rate and temperature on the dynamical properties of metals beyond the elasticity limit is presented. Constitutive equations describing the behavior of metals under these conditions are modified by using available experimental data to obtain more accurate results. Therefore, only narrow ranges of temperature and strain rate are investigated. Theoretical and experimental results are compared in diagrams by plotting the stress-versus-temperature curves for various strain rates for steel, iron, and aluminum, and a fair agreement between theory and experiment.

1661. Witold Wierzbicki, "Nonelastic buckling of statically determinate supported rods," (in Polish), *Instytut Budowni*, Nov. 1947, vol. 4, pp. 435-437.

The paper offers a generalization of known empirical results, concerning nonelastic buckling of a straight bar, to cases that have not been experimentally investigated.

Von Kármán's 1910 paper serves as a starting point. In his equation  $KJy'''' = -M$ , the elastic modulus  $E$  is replaced by a reduced modulus  $N$ , depending on the physical properties and the cross section and shape of the beam. This equation applies to the case of axial loads distributed along the axis of the bar and the critical load is derived for such cases as  $P_c = (\pi^2 NJ)/(\mu l)^2$  or  $P_c = (\pi^2 N' J)/l^2$  where  $\mu$  depends on the distribution of the loading and  $N' = N/\rho$ .

The author compares the critical stresses derived from the last equation with those obtained for hinged ends in Tetmajer's tests, and obtains a relation between the modulus  $N$  and the slenderness ratio of the beam. A graph of this relationship is shown for steel wire. The paper concludes with examples of the determination of the critical load for nonelastic buckling under various types of loading.
